

OneplantRack

OneplantRack is an individual plant rack, intended to increase the stability per plant. It can also give each plant its own space and place.

- This plant rack is used by tree nurseries and in garden centres.
- The design of OneplantRack offers a lot of stability for plants.
- With OneplantRack, you can easily determine the space for each plant, and where you want to position it.
- The shape of the supports allow the plants to be placed pot-to-pot.
- The OneplantRack is available in the standard sizes: 2L, 3L, 4L, 5L, 7.5L, 12L, 15L and 20L.
- The standard model OneplantRack is developed for the 'tree container pot'; most brands will fit.
- If necessary, we can make the OneplantRack to your specific dimensions.
- OneplantRack is sold in bundles of 10 items.
- The top ring is resilient, which means that the pot will be firmly clamped under the edge.
- The rack is made from regular galvanized wire.
- The holders are easy to position and to stack, and they don't take up a lot of space.
