

V-feetRack Garden Centre

'V-feetRack Garden Centre' is a wire rack developed especially for garden centres and retail. This model is used to support pots in all shapes and sizes, and to improve the presentation of the plants.

- The main goal is to improve the presentation of the plants.
- Due to the many different pots used in retail, 'V-feetRack Garden Centre' offers a great solution for both presentation and support of plants.
- Due to the smaller size, the 'V-feetRack Garden Centre' is very suitable to disperse or to create blocks.
- These racks have an even sectioning, which allows the plants to be positioned in a checkerboard pattern or in any desired pattern.
- The 3L, 5L, 7.5L and 10L types are available as the standard type with even sectioning; the 12-15L model has spacers between the pot squares.
